

## NOVA UNDERCARRIAGE LIMITED WARRANTY

### NOVA LIMITED WARRANTY UNDERCARRIAGE

NOVA Undercarriage warranty covers only new parts sold by QCC, which are correctly installed and used in normal operations. (As per the operational manual of the machine manufacturer.)

Coverage is limited to the first 4500 hours of service or three years from purchase or 100% worn, whichever comes first.

This coverage includes crawler skidder, forestry applications and other non-traditional use equipment.

Adjustment is determined Pro-rata based on the measurement of key components or ratio of service life received. The Pro-rata value is at NOVA's determination.

If any undercarriage components are replaced due to warranty coverage listed above, with the Customer paying more than 50% of new pricing, the undercarriage warranty will restart on the newly purchased components.

Adjustment for premature dry joints in oil-lubricated chains is limited to the failed parts replaced.

Excavator track link assemblies that are seized due to periods of inactivity in high moisture environments are not considered product defects and, therefore, not eligible for warranty.

Product coverage is for:

- Components and assemblies of rollers, idlers, sprockets, chains, shoes and fasteners.
- Seal leakage in SALT chains, rollers and idler groups.
- Abnormal breakage of components.
